github.com/fikrihidayatulloh16 | [Personal Portfolio](#)

Junior Software Engineer (Cloud & Infrastructure Enthusiast) | AWS Certified Cloud Practitioner. Specialized in architecting scalable SaaS solutions using NestJS, TypeScript, and Linux Systems. Experienced in managing self-hosted infrastructure using Proxmox VE.

EDUCATION

Politeknik Negeri Bandung

Applied Bachelor of Computer Science (D4 Teknik Informatika)

Bandung, Indonesia

Aug 2020 – Aug 2025

EXPERIENCE

Freelance Software Engineer

Feb 2026 – Mar 2026

AI Translation Platform

Remote

- Engineered a simple web scraping pipeline using Go for concurrent data extraction, reducing report generation time from several minutes to seconds.
- Developed a reactive frontend dashboard using SvelteKit and integrated a self-hosted LibreTranslate AI model via REST APIs, eliminating reliance on paid 3rd-party translation APIs and localizing data dynamically.

Lead Fullstack Engineer | [Live App](#)

Jan 2026 – Feb 2026

BKLM CBT Assessment System

Remote

- Architected a type-safe Modular Monolith using NestJS and PostgreSQL, implementing Clean Architecture to ensure maintainable data flow for high-concurrency assessment workloads.
- Engineered a real-time observability system using WebSockets and Redis, optimizing network throughput via WebSocket-only transport to resolve session-sync issues and minimize latency.
- Automated end-to-end deployment on Proxmox using Docker and Nginx Reverse Proxy; leveraged Ansible for Infrastructure as Code and Cloudflare Tunnels for secure, high-performance public access.

Fullstack Engineer Intern

June 2024 – Oct 2024

PT Ramu Prima Persada (Construction & IT Consultancy)

Bandung, Indonesia

- Developed a monolithic web-based construction monitoring system using PHP and MySQL, modeling relational databases to track project milestones and resource allocation.
- Implemented automated data aggregation workflows, standardizing output formats and reducing manual reporting effort by 80%.

PROJECTS

Web Security & Performance Research | *Python, Flask, Grafana*

Jan 2025 – Jul 2025

- Developed Python automation scripts for continuous system log collection, visualizing real-time hardware and application metrics on custom Grafana dashboards.
- Researched performance trade-offs by implementing API Rate Limiting and Role-Based Access Control (RBAC), optimizing server configurations to reduce CPU utilization by 10% under simulated load.

Student Attendance System | *Java, Spring Boot, WebSocket, MySQL*

May 2025 – Jul 2025

- Engineered a backend system utilizing Java Spring Boot and Hibernate (Spring Data JPA) to handle strict data validation and secure RESTful operations.
- Implemented real-time bi-directional event streaming via WebSockets to instantly push check-in notifications to the administrative client.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, PHP, Go

Frameworks: NestJS, Next.js, Flask, React, Node.js, AstroJS, Spring Boot, Svelte

Database: PostgreSQL, MySQL, SQLite, MongoDB

Developer Tools: Docker, Git, Socket.io, TanStack Query, Prometheus, Grafana, Sanity.io, Redis, Hibernate

Infrastructure: AWS Certified Cloud Practitioner, Proxmox VE, Cloudflare Tunnels, Linux (Ubuntu/Debian)
