Backend Engineer — NestJS · TypeScript · PostgreSQL · AWS Certified Cloud Practitioner

SUMMARY

I build backend systems that are meant to last — clean architecture, typed APIs, and deployments that don't require babysitting. Most of my recent work has been in NestJS and TypeScript, with real-time features via WebSockets and self-managed infrastructure on Linux. I'm looking for a junior or intermediate backend role where I can work on a real enterprise product and improve my backend skill.

EXPERIENCE

- Lead Backend Engineer — BKLM CBT** Jan 2026 – Present
Custom EdTech Assessment Platform for Educational Counselors (BK teacher) Remote
- Developed a modular backend API using NestJS and PostgreSQL, enforcing strict separation of concerns to ensure system maintainability during rapid feature expansion.
 - Added real-time session sync using WebSockets and Redis; fixed a race condition that caused exam state to drift between clients under concurrent load using worker.
 - Set up the full deployment pipeline: Docker, Nginx reverse proxy, CI/CD(Github Action), Ansible for provisioning, and Cloudflare Tunnels for public access — all on a self-hosted Proxmox server.
- Freelance Backend Engineer — AI Translation Platform** Feb 2026 – Mar 2026
Client project Remote
- Wrote a concurrent scraping pipeline in Go that brought report generation time down from a few minutes to under 10 seconds.
 - Wired a self-hosted LibreTranslate model into a SvelteKit dashboard via REST — removed the dependency on paid third-party translation APIs entirely.
- Fullstack Engineer Intern** Jun 2024 – Oct 2024
PT Ramu Prima Persada — Construction & IT Consultancy Bandung, Indonesia
- Built a web-based construction monitoring system in PHP/MySQL to track project milestones and resource allocation for the internal ops team.
 - Automated the reporting pipeline — what used to take manual aggregation now runs on a script, cutting the effort by around 80%.

PROJECTS

- Web Security & Performance Research** | *Python, Flask, Prometheus, Grafana* Jan 2025 – Jul 2025
- Set up automated log collection and built custom Grafana dashboards to monitor real-time hardware and app metrics.
 - Tested the impact of API rate limiting and RBAC on a Flask server under simulated load — Prometheus metrics showed a measurable drop in CPU usage.
- Student Attendance Backend** | *Java, Spring Boot, WebSocket, MySQL* May 2025 – Jul 2025
- Built the REST API layer with Spring Boot and Spring Data JPA, handling validation and data integrity for attendance records.
 - Pushed real-time check-in events to the admin client via WebSocket — no polling needed.

EDUCATION

- Politeknik Negeri Bandung** Bandung, Indonesia
Applied Bachelor of Computer Science (D4 Teknik Informatika) Aug 2020 – Aug 2025

TECHNICAL SKILLS

Core Languages: TypeScript, JavaScript, SQL, Python, Go
Backend: NestJS, Node.js, Spring Boot, Flask — REST, WebSocket, Redis, Prisma, Hibernate
Databases: PostgreSQL, MySQL, MongoDB, SQLite
Infrastructure: Docker, Nginx, Ansible, Proxmox VE, Cloudflare Tunnels, Linux (Ubuntu/Debian)
Cloud & Tooling: AWS Certified Cloud Practitioner · Git · Prometheus · Grafana
Frontend (supporting): React, Next.js, SvelteKit
